## The BAMP

*Ball And Marker Pickup*

*The Most Versatile Golf Ball Pick-up in the world*

To help you gain the full benefit of this product please read this manual fully prior to use.

This product does use a small neodymium magnet. It is advisable to read the magnet page for further information.

Helpful videos can also be found on our web-site [www.zerobendgolf.com/demos](http://www.zerobendgolf.com/demos)

### *Useful Information*

*To avoid unnecessary pressure on the grip or the magnet when removing the rubber **Cup** from your Putter it is best to use a '**Rolling Off**' action as opposed to '**Pulling**' it vertically away from the magnet.*

# The BAMP Instructions

## 1. THE BAMP PRO COMPONENTS

a) Rubber Cup (colour varies)

b) Magnetic Peg

c) Ball Marker

d) Cup CADDY

## 2. FITTING THE MAGNETIC PEG

Whilst ensuring that the metal nut is in the centre of the beige plug and the screw is located into the end of the peg (as supplied), clasp the beige peg between two fingers and gently push it down into the small hole found on the top of your putter grip.

*The device should fairly easily push into the rubber but if not then lightly lubricating the peg with washing up liquid or similar may help.*

**Important:-** The 'nut' must be fitted to the peg so if you ever remove the whole magnetic peg from your putter grip please only ever unscrew the magnet a few turns (approx 7 -10 turns, 3 - 4 mm) to avoid the nut falling out and ending up inside your club shaft. Refit peg as supplied.

Continue to push the peg down until the black spacer is as near to flush with the top of the putter grip as possible.

**TIP:-** If you find that you are having difficulty in getting the top of the beige plug flush with the putter grip then you could try placing the blades of a "pitchmark repairer" in-between the top of the plug and the bottom of the black spacer and then try pushing it down using this as a tool.

# The BAMP Instructions

## 3. FITTING THE MAGNETIC PEG (CONT.)

🔩 To tighten the device down to the top of the grip firstly attach the Rubber cup to the magnet and over the black spacer then using it as a tool turn it in a clockwise direction and continue turning until the magnetic peg has tightened down sufficiently.

***You may find that a final tightening is required by hand to ensure that the peg is fully fitted. (Right Photo)***

🔩 Once fitted, the device should be secure and should not easily pull out. The photo on the Right is a good example of how it may look when fitted correctly.

***With some style of putter grips you may notice that the Black Spacer still turns when spun but if the peg is fitted as near to flush as possible to the top of the grip then this should not prevent the device from operating as expected.***

***Finger tighten periodically if necessary.***

# The BAMP Instructions

## 4. PICKING UP YOUR GOLF BALL

- 🏌️ Clip the rubber cup onto the magnetic peg
- 🏌️ Point the rubber cup towards your golf ball and place vertically or near vertically over the ball.
- 🏌️ **\*\* Now gently apply downward pressure until the cup gathers the ball successfully. \*\***
- 🏌️ When removing the cup from the putter use a Sideways Rolling action to avoid unnecessary strain on the putter grip and magnet.

***\*\* NB:- There is NO need to 'STAB' at or use excessive pressure when picking up the ball. The cup is designed to pickup the ball by applying steady gentle downward pressure \*\****

## 5. PICKING UP YOUR MARKER

- 🏌️ With the cup removed and after replacing your ball on the green you can use the magnetic peg to retrieve your ball marker.

# The BAMP Instructions

## 6. MARKING YOUR BALL ON THE GREEN

The following is our recommended method:-

### Step one:

With the rubber cup attached to your putter, lay the ball marker **Upside down** into the cup just behind the ridge as shown in the adjoining photo. (TIP: You can perform this whilst walking towards your ball on the green?)

***Avoid twisting the shaft as this will allow the Marker to slip between the opening of the Cup's jaws. !!***

### Step two

Lower the cup close to your ball at an angle of about 45° from the green until one edge of the cup is touching the ground. At this angle it is unlikely that the marker will prematurely slip out of the Cup provided that the action of lowering the putter is reasonably smooth.

### Step three

Whilst maintaining the cup touching the ground, raise the putter shaft to an angle of approximately 70 to 80°, in other words quite close to vertical and then push gently downwards on the shaft. This will cause the Magnet to 'break' away thus allowing the Cup to 'hinge' slightly away from the end of the putter handle and the marker to fall out.

### Step four

Finally drag the Putter back towards you and the Cup should clip back into place and the Marker will be left just behind the ball. ***If necessary move the marker closer to the ball using your putter head. Now lift your ball from the green using the Cup.***

# The BAMP Instructions

## 7. STORAGE OF THE RUBBER CUP

🧠 Stow the Cup in a clothing pocket during your round or on the “Caddy” if purchased or on one you have made up yourself.

🧠 The Rubber Cup should be removed from your putter before stowing into your golf bag.

*It is advisable to remove the cup from the caddy after play and store in your golf bag for example. This will help avoid any accidental detachment of the cup during transit i.e when putting your golf bag back into the car !*

## 8. MAGNET HEALTH & SAFETY NOTICE

You MUST read this BEFORE handling the enclosed magnets.

### IMPORTANT HEALTH & SAFETY INFORMATION

You **MUST** read this safety advice **BEFORE** handling these magnets, to avoid personal injury and / or damage to your magnets.

#### LIABILITY

Magnet Expert Ltd does not accept any responsibility for damage caused by the improper handling of these magnets. These magnets have a surprising amount of magnetic power and if handled incorrectly can be dangerous. If you are giving magnets as a gift, please be sure to enclose this warning sheet.

#### HEART PACEMAKERS

Keep magnets away from heart pacemakers. The operation of heart pacemakers will be affected by the close proximity of a magnet. Magnets can set a pacemaker working in a way that is not suitable for the user and that might affect their health.

#### MAGNETS LEAPING TOGETHER

If two magnets are placed loosely apart they could leap together unexpectedly, with **extreme speed and force**, which could shatter and break both magnets and could injure your finger if it is caught in between. Flying chips are sharp and could be a danger to eyes. Handle only one magnet at a time.

#### NICKEL ALLERGIES

These magnets are coated with nickel. If you have a nickel allergy prolonged contact with skin may cause irritation.

#### SEPARATING STRONG MAGNETS

Use a wooden table or desk and overhang one magnet. Apply a strong downward pressure to separate. Once separated, keep moving the magnet to a safe distance of 500mm+.

It is five times easier to **SLIDE** magnets apart than it is to pull them apart.

#### SIZE AND RISK FROM TWO MAGNETS

1cm <sup>2</sup> +	risk of nipping	10cm <sup>2</sup> +	risk of cuts
4cm <sup>2</sup> +	risk of blood blisters	30cm <sup>2</sup> +	risk of crushing finger tips

#### CHILDREN

**DO NOT** allow children to handle these magnets, they are too powerful, will cause trapping injuries and can be fatal if swallowed.

#### MAGNETICALLY SENSITIVE ITEMS

Keep away from credit cards and other magnetically stored media.
